ownership verification

Week 3:

Technical validation +
founder profiling

Week 4:

Manual Review +
Final Icp list

Tools used:

- Claude
- Gemini
- Python
- Scraping tools
- Python
- Export Databases
- Github copilot

My Research & validation process.

Assignment Requirements

Initial company search
(Justdial, google maps,
Indiamart, Claude).

AI-Assisted Analysis
(Claude + Gemini)

Cross verification
(Toptal, Zauba,
Linked In)

Removed wrong matches
- mnc subsidiaries
- commodity manufacturers
- weak technical
firms under revenue

Manual review
(product, founder profiles)
technical specialization)

Final ICP companies

How I controlled AI
Hallucination:

- Did not trust AI output directly
- verified company manually
- cross checked revenue
- use multiple sources

Where I Disagree
with AI

- some companies suggested by AI were actually subsidiaries
- some firms location was different
- Some revenue was incorrect & inaccurate

How I focused Assignment guidelines:

- verified technical depth of the companies
- Focused on independent companies
- checked background of the companies
- used evidenced based filtering
- used multiple source to check whether the criteria of the Assignment is meet.
